EYEBROW TINTING STEP BY STEP

To ensure better results, start by washing the eyebrows with MAXYMOVA cleansing foam.

Prepare the mix by combining 1 drop of MAXYMOVA developer with 2 drops of tint. **Important:** be sure to use only MAXYMOVA CREAM DEVELOPER to mix the eyebrow tint.

Avoid using metal tools during the preparation and application of the tint. Instead, use a brush and a non-metallic container (such as a Nanopad or a plastic cup) to mix the components.

Apply the tint to the eyebrows following the natural direction of hair growth. Choose a tint that matches the eyebrow color or a lighter or darker shade, depending on the client's preferences.

The processing time varies from a minimum of 2 minutes to a maximum of 10 minutes.

Note: the longer the processing time, the more intense the result will be.

At the end of the processing time, gently remove the tint using a cotton pad or a cotton swab, then rinse thoroughly with water.

Final styling: After drying the eyebrows, apply MAXYMOVA Lash&Brow Cocktail for a nourishing treatment. Use MAXYMOVA Brow Gel Fix&Go for a trendy styling finish.

For professional use only. Conduct a patch test 48 hours before application to check for any allergic reactions.
